

EZEQUIEL CARDONA

Full-stack developer

PORTFOLIO

<https://ezequielcardona.dev>

MAIN SKILLS

FRONT-END:

- React fundamentals, use of *React hooks*, and creation of custom ones.
- Use of *Redux Toolkit* for global state management.
- Use of *react-testing-library* for unit and integrational testing.
- Use of design templates like *Material UI* or *Bootstrap*, and other style controls like *CSS modules* or *styled components*.
- Use of *Three.JS* for 3D UX.
- UX history tracking and analyzing for constant user flow experience, with tools like *Google Analytics* and *Hotjar*
- Solid use of *HTML* and *CSS* for rendering FE.
- Use of the main techniques for SEO.

BACK-END:

- Node.js fundamentals. Use of frameworks like *Nest.JS* or *Express.JS*, for building RESTful APIs or server-side apps. Authentication, security, and error handling.
- Use of tools like *Sequalize for controlling PostgreSQL* and *Mongoose for MongoDB*.
- Use of *Docker* and *Kubernetes* for creating, managing, and deploying microservices.
- Unit tests with tools like *Nest.js Spec library*.
- Use of *PHP* for building server-side apps.

OTHERS:

- Use *ESLint* and *Typescript* for code formatting, and data typing.
- Use of agile methodologies for grooming and implementing product requirements.
- Use of *Heroku* and *Netlify* for serving remote applications.
- Use of *GIT* methodologies for running and maintaining an app at production.

SUMMARY

I'm a passionate and creative JavaScript Middle Software Developer. Beginning as a freelance, I gained valuable professional communication skills and learned the importance of taking ownership of my work.

Focused on JavaScript's main modern frameworks, I became proficient with the MERN (Mongo, Express, React, Node) architecture to build robust web applications. I've also used PostgreSQL and Nest as variations to this skeleton. I'm frontend oriented and have a lot of experience building UIs and user flows in 2D and 3D using Three.js.

As for now, I'm specializing in Docker-compose for orchestrating micro-service architectures. In parallel, I've started to work in DevOps, leveraging cloud services like AWS, Netlify, and Heroku.

Throughout my journey, I have collaborated with a range of industries, including e-commerce, software consultancy, travel agencies, and currency exchangers.

PROJECTS

React + Node web app collaborations:

- <https://launchpod.agileengine.com>. An automation tool for job applicants to run their own process.
- Developer Submission Profile. An intern automation tool for a big software consultant recruitment process.

React + PHP web app creation:

EXPERIENCES

Agile Engine, React Engineer

Jan. 2022 - Jan. 2023

- Worked as a React engineer covering all phases of a front-end structure.
- Designed and implemented UX proposals into front-end structures.
- Covered full-stack functionality implementations with a back-end architecture already built.
- Groomed functionalities and implemented them as the owner of user stories.
- Participated in stakeholders' meetings as the face of the developer team.

VeneCambiosPana, Full-stack developer

Jan. 2021 - Aug. 2021

- Designed an automation tool for the business model, that saved steps for both business operators and clients.
- GIT and deployment maintenance.
- Client/stakeholder - dev bridge.

Freelancer, Full-stack developer

Feb. 2019 - Jan. 2021

- Worked on multiple projects including a CMS written in JS with React, PHP, and MySQL, responsive websites for e-commerce, and single-page applications.
- Developed communication and ownership to a solid level in the niche of web applications.

THANK YOU!
